

Physocarpus 'Center Glow'

Physocarpus 'Center Glow'

Syringa 'China Snow'

Syringa 'Beijing Gold'

In our continuing effort to offer our customers an ever increasing list of plant material, we are proud to introduce some of our new varieties for 2011.

Available in Bare Root:

Acer triflorum, a small Asian maple that is hardy to Zone 4b. This slow growing Maple has trifoliate leaves that in fall turn orange, red and yellow. The bark is exfoliating and is very ornamental. Use in the same situation that you would Acer griseum.

Malus 'Robinson', you would think we would have been growing this one all along. This is a deep pink flowering, disease resistant apple. The leaves emerge purple, turn to bronze in summer and has orange fall color. The 3/8" bright red fruit persists into winter.

Physocarpus 'Center Glow', tree form, with a great flower and new foliage that is golden yellow turning to burgundy. The color contrast of the golden center and purple leaves is striking.

Platanus Exclamation® and **'Ovation®'**, both from the Morton Arboretum, chosen for disease resistance.

Syringa 'Beijing Gold'™, is a 20' tall tree with Zone 4 credentials. It produces a soft yellow flower, has cinnamon colored bark and a yellow-gold fall color

Syringa 'China Snow'®, is a somewhat more vigorous tree with dark cinnamon exfoliating bark and a white flower.

Ulmus 'New Harmony', and **Ulmus 'Princeton'**, American Elms proven to be disease resistant.

Fruit Trees

We are proud to announce that for the first time in many, many years, we are offering bare root fruit trees.

Apple,

Granny Smith

Honey Crisp

Jonathan

McIntosh

Red Delicious and

Yellow Delicious

Cherries:

Bing

Black Tartarian

Montmorency

Apricot:

Moongold

Moorpark

Peach:

Elberta

Red Haven

Plum:

Stanley

Superior

Pear:

Bartlett

Summer Crisp

Shrubs

And finally, we are introducing three bare root shrub varieties:

Amalanchier laevis, a Zone 4 large shrub or small tree with yellow fall color, striking striped bark and fruit for birds.

Cornus 'Ivory Halo', a white/green variegated shrub with showy flowers that attract birds and butterflies, and good fall color.

Heptacodium miconioides, A mid-west native with white flowers, unusual red fruit and sepals, and tan and brown exfoliating bark.

Heptacodium miconioides fall sepal color
